Title: The endocrine impact of long term risperidone therapy in Asian Indian patients		
107	However, these adverse effects are of concern and need to be more objectively in people on psychotropic medication.	However, these adverse effects are of concern and need to be more objective in people on psychotropic medication.
111	Knegtering <i>et al.</i> [15] reported a study to comparing sexual side effects of prolactin rising antipsychotic medication with those on non prolactin rising ones.	Knegtering <i>et al.</i> [15] reported a study comparing sexual side effects of prolactin rising antipsychotic medication with those on non prolactin rising ones.
111	Our data showed that 40% of patients on risperidone had low BMF (osteopenia or osteoporosis).	Our data showed that 40% of patients on risperidone had low BMD (osteopenia or osteoporosis).
111	The inpatients who were on prolactin rising antipsychotic medication for a average period of ten years measures to have reduced BMD as 7 (57%) of the male and 8 (32%) of the female patients.	The inpatients who were on prolactin rising antipsychotic medication for an average period of ten years measures to have reduced BMD as seven (57%) of the male and eight (32%) of the female patients.
Title: Phenomenology and predisposing factors of morbid jealousy in a psychiatric outdoor: a cross-sectional, descriptive study		
133	Possible explanation could be that our study was done in Indian psychiatry setup where most cases were purely functional as the caregivers prefer first vising other clinical specialty due to associated stigma and lack of psychiatric treatment, and as such the possible organic cases get admitted in other clinical branches before getting referred to psychiatry.	Possible explanation could be that our study was done in Indian psychiatry setup where most cases were purely functional as the caregivers prefer first visiting other clinical specialty due to associated stigma and lack of psychiatric treatment, and as such the possible organic cases get admitted in other clinical branches before getting referred to psychiatry.
Title: Occupational stress among police personnel in India		
148	This finding has important implications for any kind of organisation especially police, because job satisfaction has been shown to predict poorer levels of commitment, outcome, and an increased likelihood of resigning from the work.	This finding has important implications for any kind of organisation especially police, because lower levels of job satisfaction has been shown to predict poorer levels of commitment, outcome, and an increased likelihood of resigning from the work.
Title: A study on perceived parenting style among transgender		
160	With regard to paternal parenting behaviour, this finding is consistent with and similar to findings reported by Simon <i>et al.</i> [17] and Green,[11] indicating that fathers of transsexuals were perceived to be hostile and rejecting, less dominant, less caring, less available and reliable with regard to support, critical, contemptuous.	Omit.
160	With respect to maternal parenting behaviour, this finding is consistent with and similar to findings reported by Simon <i>et al.</i> ,[17] indicating transsexuals characterised their mother as less caring, less affectionate, and more controlling during their childhood than the non-transgender comparative group.	Omit.
